Introduction

Establish a Global Platform to facilitate IP Information Exchange

With the goal of **enhancing accessibility** and **the exchange of intellectual property information**, we are introducing a global platform. This platform's development is guided by national policies and grounded in the findings of our current task force study.

Current Situation

IPOs Limitations and Constrains

IP offices around the world often face significant challenges when it comes to exchanging data and information. Due to varying technological infrastructures, divergent data standards, limitation of manpower and capacity constraints.

IPOs Duplication of Efforts

In their own efforts, IPOs frequently encounter situations where they duplicate efforts in data exchange and model trainings. This redundancy not only results in wasted time and resources but also creates inconsistencies..

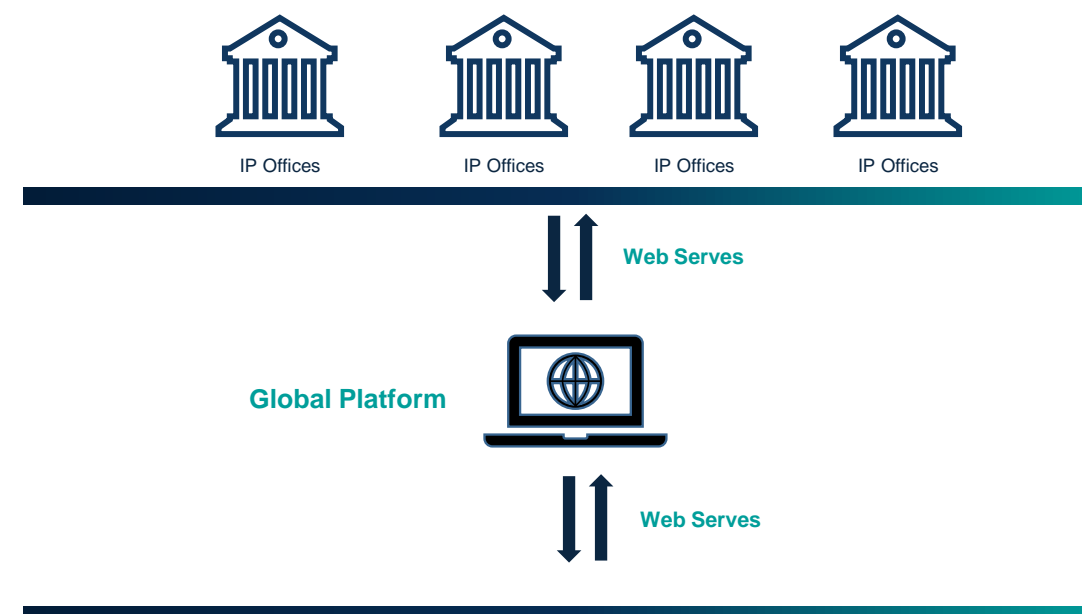

Brief Proposal

Description and Business Model

To address the fragmented landscape of intellectual property (IP) data request, we propose a global Platform under WIPO's supervision and developed and managed, harmonizing and standardizing IP data from diverse sources, including patents, trademarks, copyrights, and industrial designs. The platform will adhere to data privacy regulations and IP protection standards, offering a user-friendly interface, and multilingual support.

This global IP Platform will become an invaluable source for IPOs, facilitating data flow from/to different offices, support and expediate efficient exchange activities among offices, and promote IP data standardization.

Brief Proposal

Expected Steps and Stages

1

Step One

- Receiving Sharing IP Information exchange requests.

2

Step Two

- After fulfilling the requirements, such as signing an agreement, IP Information will share.

Expected Benefits and Outcomes to be Realized

- 1 Supporting and encouraging all intellectual property offices to exchange their IP Information.
- 2 Facilitating automated IP Information exchange with accreditation.
- 3 Facilitating communications between IPOs regards the IP Information exchange.
- 4 Making data available to all WIPO according standards
- 5 Connecting to a secure network.
- 6 Enhancing investment in intellectual property information
- 7 Enriching knowledge and stimulating innovation.
- 8 Enhancing enforcement of international intellectual property protection.
